High Speed Double Interlock Circular Knitting Machine Series

www.becklatinoamerica.net

BIOTEX

➤ Introduction

The new designed high speed knitting machine (It could reach 30-40 rpm at its tiptop running speed.) could keep the high quality knitting fabric and overcome the common single large circular knitting machine's disadvantage of the low speed (The speed is 20-30 rpm.) and low output.

:Features

1. Adopting the special designed CAM and reformed dial segment dicer's construction design, special appearance, fluency CAM's track, so as to protect the needle from snapping during its running.
2. Equipped with yarn feed ring and prolong type designed yarn feeder to make yarn feeding & adjusting more smoothly
3. Adopting screw adjustment to induce the convenience and fleetness of adjusting fabric density.
4. Along with different cylinder gauge, it's easy to change and more suitable for knitting fabric market demand. It can produce various double cloth in high quality and various thickness.

It has many advantages with the just right feeders. The cam is easy to be changed and the turning speed is faster. It is a high effective double knitting machine.
